

URP version Guidelines:

To keep things clean, it's best to make a separate Unity project and open the URP version:

- 1- Go to "Assets/URP/"
- 2-Right click on the "URP_project.zip" file.
- 3-Now select "Show in explorer", your operating system will open this file in a new window. 4- Copy and paste the "URP_project.zip" file in an empty folder on your local drive.
- 5-Now right click on this file and select "Extract here".
- 6-A new folder containing the URP project will be created.
- 7-Now open the Unity hub and click on the "Add" button and select the newly created folder.
- 8-You're all set to start working in URP.
