

“POLYQUEST TREASURES” Guidelines Document:

1- Dependencies:

Before doing anything, you have to import the “Post Processing Stack”. To do that, go to “Window/package manager” and search for “Post Processing Stack” in the search bar. Then click on “Download” and then “Import”.

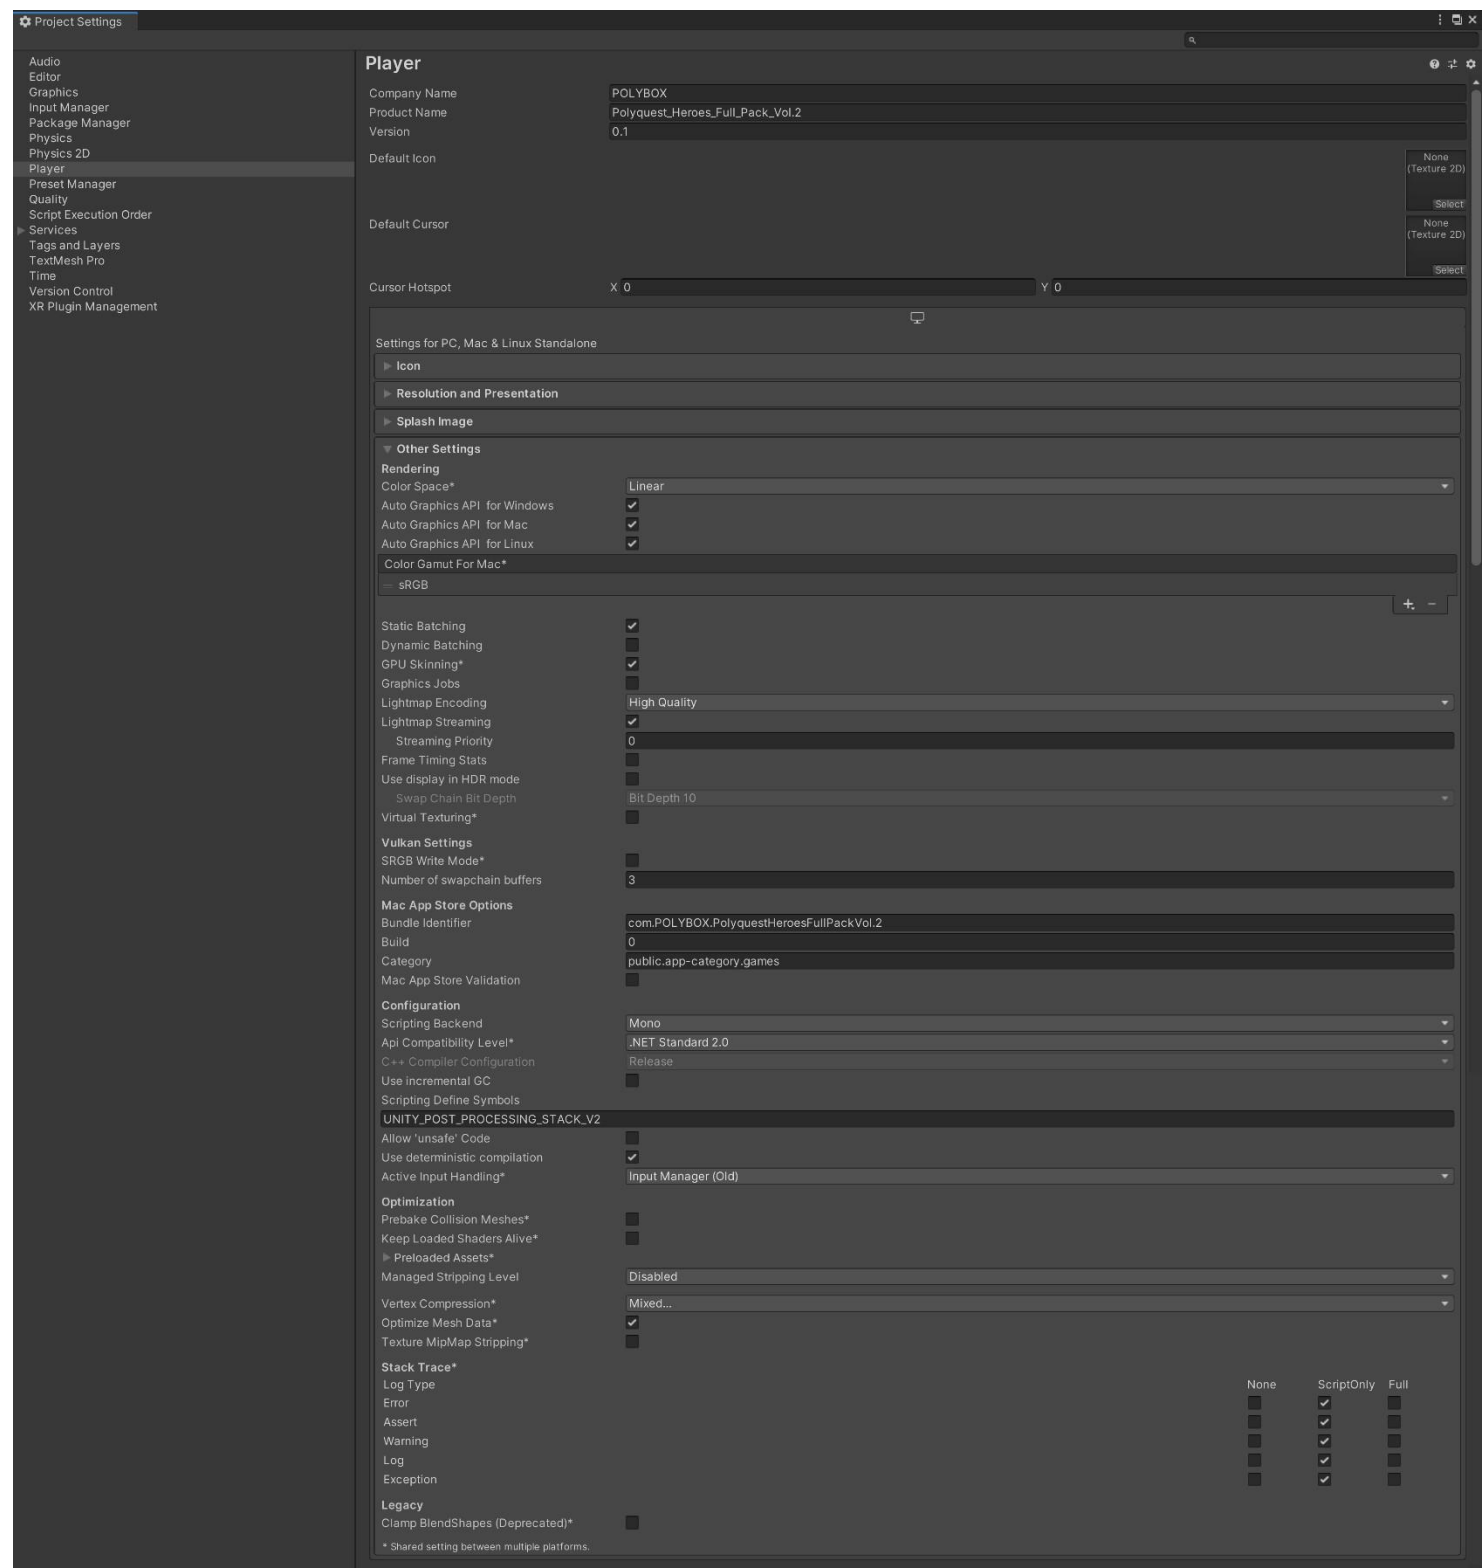

*It is also very important that you keep the FBX import settings of both characters as is.

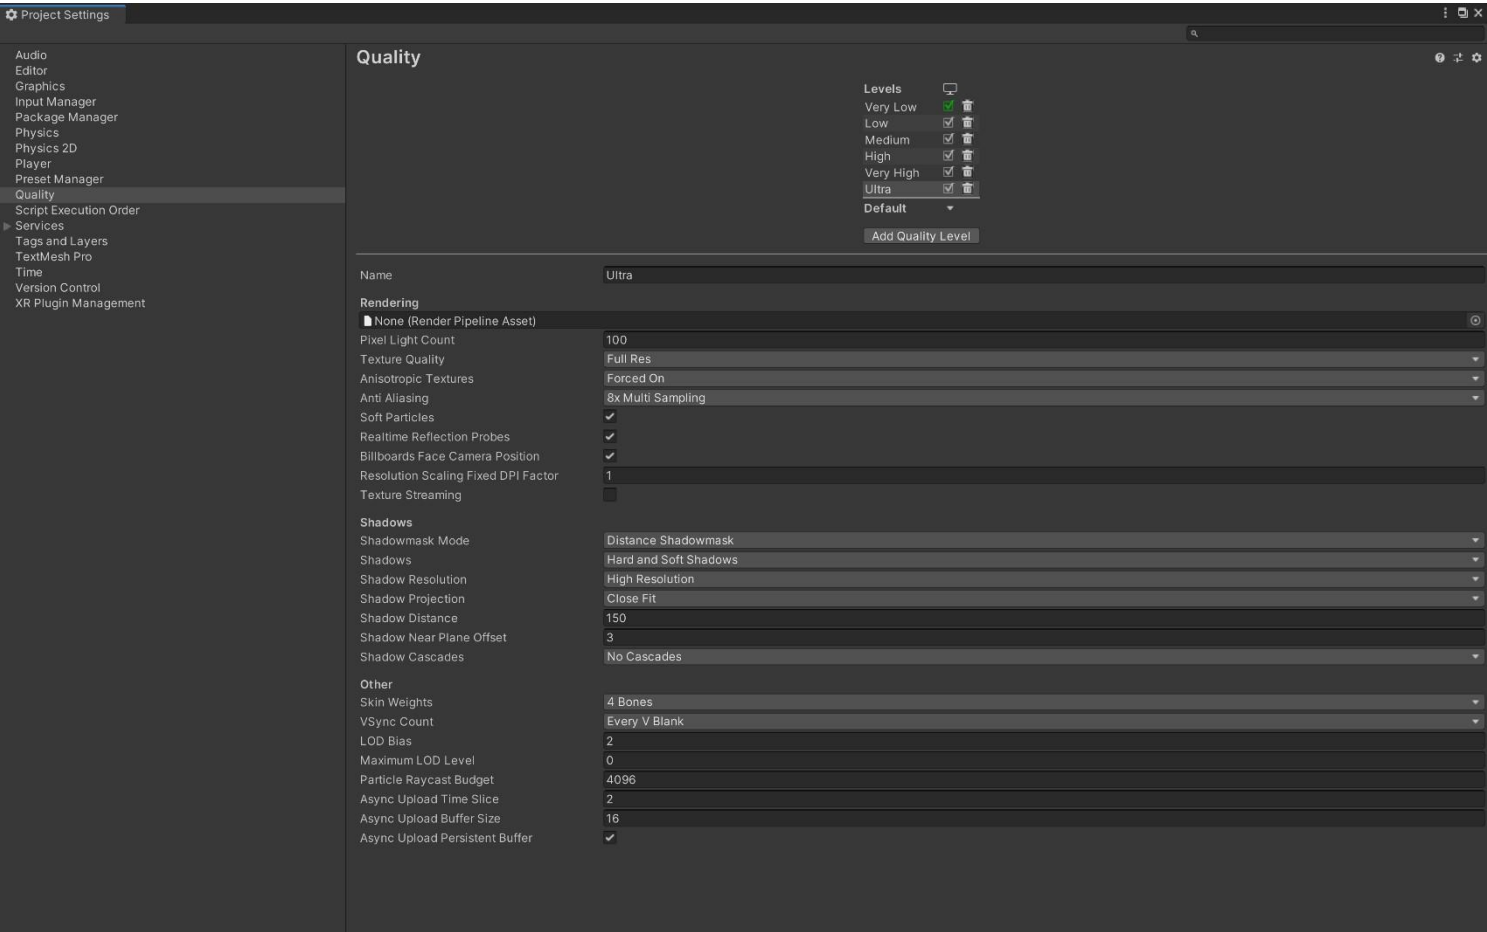

2-Settings:

Next you have to have the same player, quality, graphics and resolution settings as the settings values shown below, in order to get the exact same results as the asset store screenshots when you open the scenes:

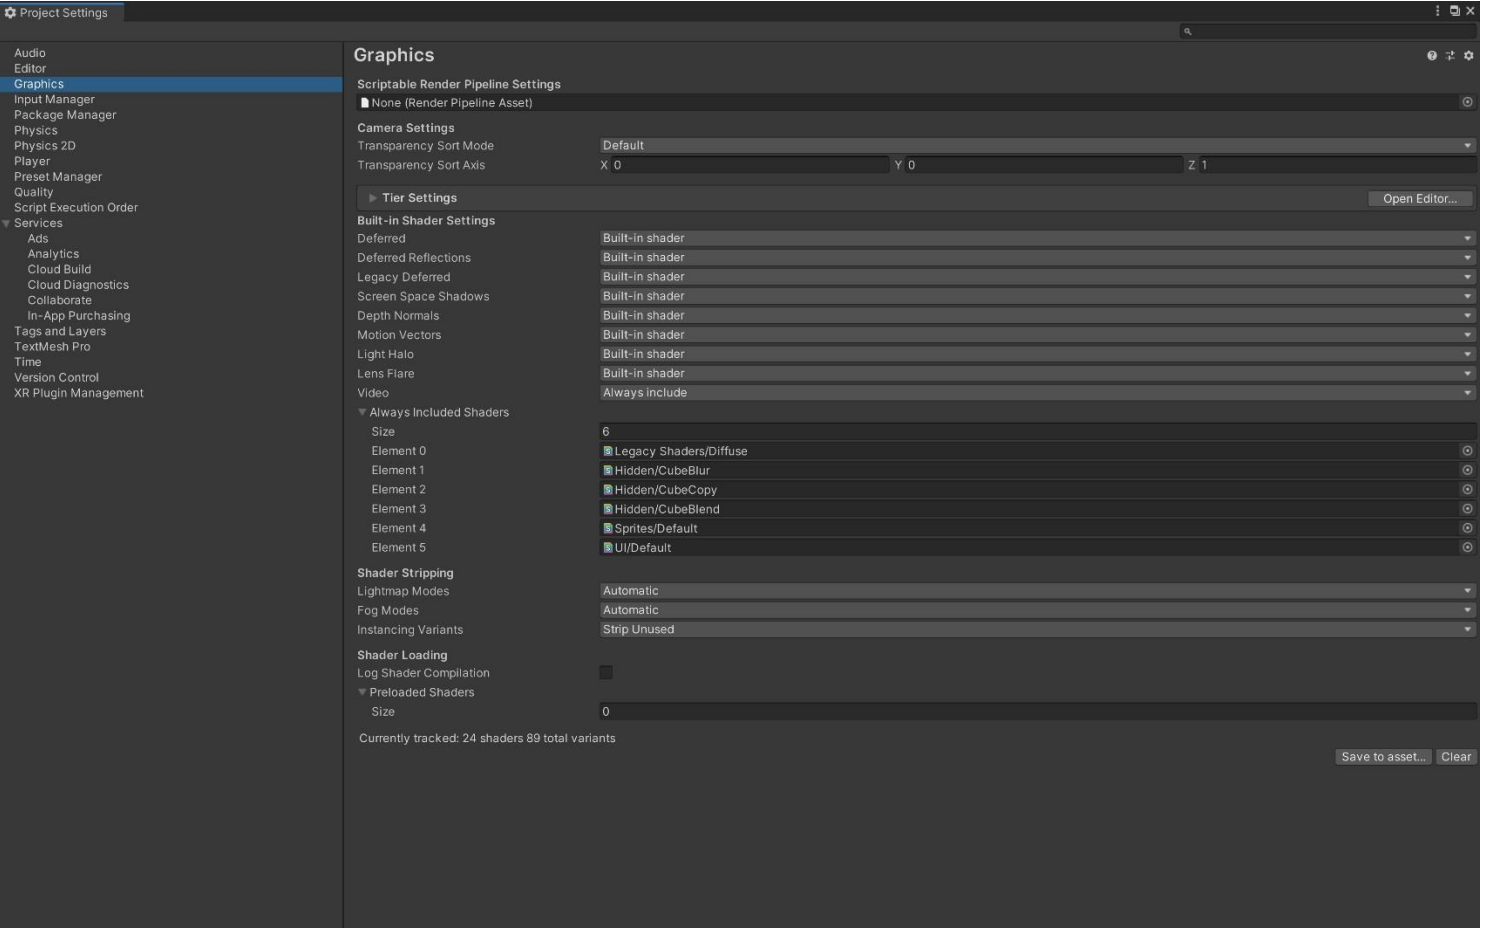

A-Player Settings:

B- Quality Settings:

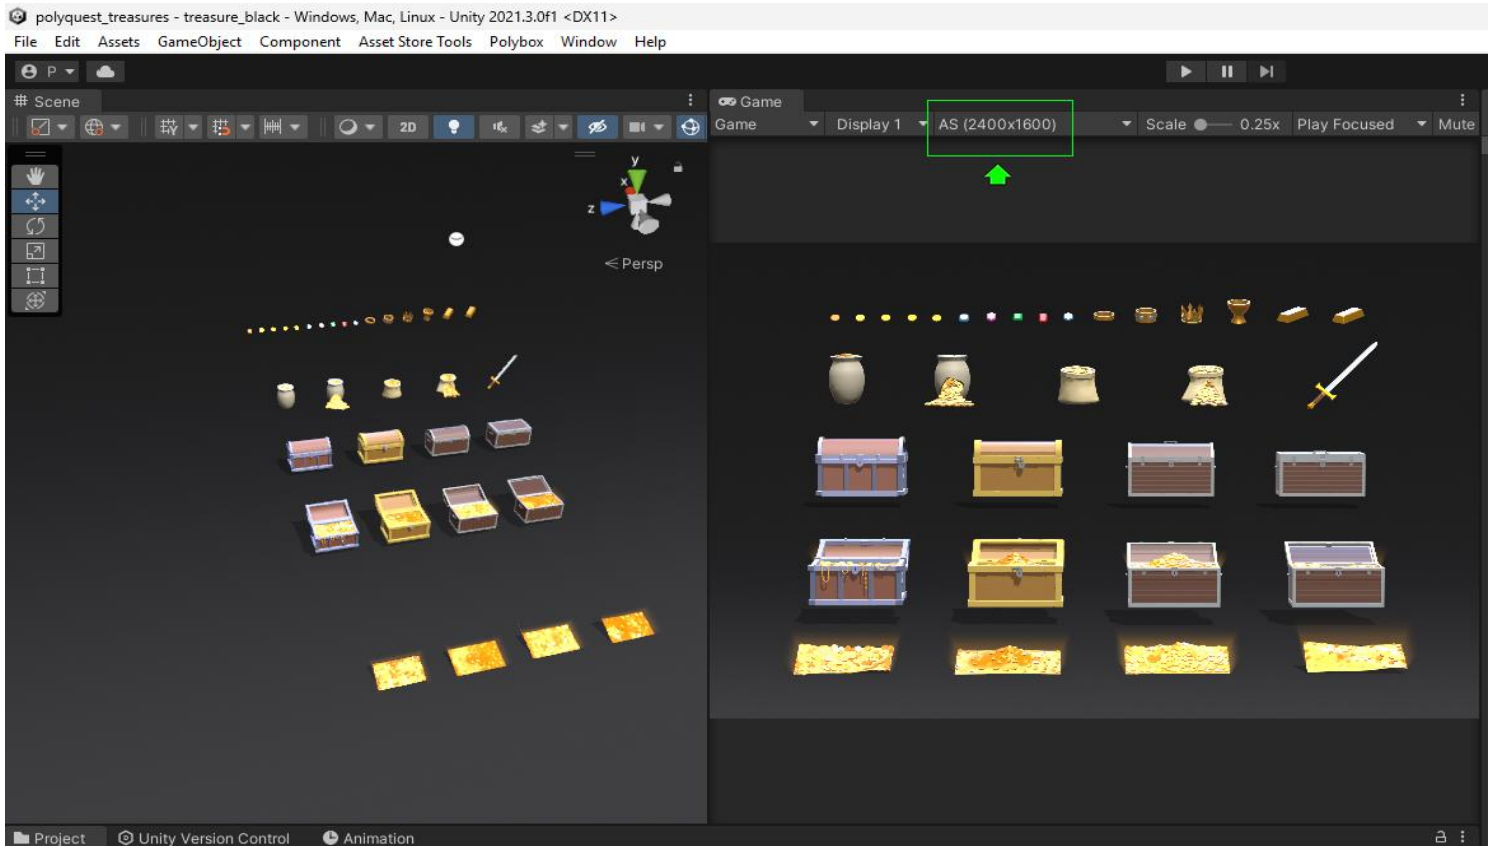

C- Graphics Settings:

B- Quality Settings:

Next you need to set the asset store's resolution and aspect ratio settings, in order to get the exact same results as the asset store screenshots when you open the scenes:
